## Dimensions required for canvas manufacture

### Old Canvas laid flat and taut

- a) Measurements in inches from buckle roller to rear edge of last wood
- b) Measurement from rear edge of last wood to end of strap
- c) Width of wood
- d) Number of woods
- e) Number of buckles

All the above information is required to manufacture a canvas if Farm & Rural Past do not have patterns.

If no old canvas is available, then a measurement around the rollers would have to suffice together with a very accurate measurement of width of side guides allowing for clearance, this would then be the width of woods.
